## Claim Rejections - 35 USC § 101 and § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The use of the word "type" in line 8 "oligomer-type" in claim 1 and in claims 5 and 6 renders the claims indefinite because it is not clear whether applicant intends to recite an oligomeric initiator or a different kind of initiator of the same type as an oligomer. Claim 7 provides for the use of the resin composition of claim 1, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 7 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

## Claim Rejections - 35 USC § 102/35 USC § 103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/073,075

Art Unit: 1711

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5, 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 97/12942. WO '942 discloses reactive silica particles treated with an organic compound corresponding to the compound set forth in instant claims 2-4 and compositions comprising the particles. Photoinitiators are taught on pages 30-31. Applicant defines "oligomer-type" photoinitiators as having a molecular weight of 400 to 10,000 on page 19 of the instant specification. The photoinitiators disclosed by WO '942 fall within the molecular weight range set forth and are therefor considered to meet the requirement for an "oligomer-type" photoinitiator in the instant claims.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 97/12942, as applied to claims 1-5, 7 and 8 above, and further in view of Li Bassi et al (4,672,079). WO '942 teaches using a photoinitiator that generates activation radicals by radiation, preferably UV light. The examples taught do not include the photoinitiator set forth in instant claim 6. Li Bassi et al teach polymeric or polymerizable aromatic-aliphatic ketones of formula (I), encompassing photoinitiators of the formula set forth in instant claim 6, suitable as polymerization initiators for the photopolymerization of ethylenically unsaturated monomers or prepolymers. Li Bassi et al teach that the disclosed photoinitiators have high efficiency in regard to the useful concentration required and to the polymerization rate and have other advantages (column 2, line 57, to column 3, line 2). Li Bassi et al teach that the polymeric photoinitiators can be used with tradiational photoinitiators, such as those taught by WO '942 (column 4, lines 60-66).

It would have been obvious to one skilled in the art at the time of the invention to employ the polymeric photoinitiators taught by Li Bassi et al as the photoinitiator in the compositions disclosed by WO '942. Alternatively, It would have been obvious to one skilled in the art at the time of the invention

Application/Control Number: 10/073,075

Art Unit: 1711

1711

to employ the polymeric photoinitiators taught by Li Bassi et al in combination with the photoinitiators

Page 4

disclosed by WO '942 in the compositions disclosed by WO '942. WO '942 provides motivation by

teaching that a photoinitiator that generates radicals by radiation is preferred. WO '942 does not limit the

photoinitiator to those set forth as examples. Li Bassi et al provide motivation by teaching the advantages

of using the polymeric photoinitiators disclosed. One of ordinary skill in the art at the time of the

invention would have been motivated to employ the polymeric photoinitiators disclosed by Li Bassi et al

by an expectation of taking advantage of the higher polymerization rate than conventional photoinitiators

and of obtaining products that do not yellow under UV light or sunlight and other advantages taught by Li

Bassi et al.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should

be directed to Susan W Berman whose telephone number is 703 308 0040. The examiner can normally

be reached on M-F 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James

Seidleck can be reached on 703 308 2462. The fax phone numbers for the organization where this

application or proceeding is assigned are 703 872 9310 for regular communications and 703 872 9311 for

After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should

be directed to the receptionist whose telephone number is 703 308 0661.
